

Grave Moss

Alchemical Ingredient

- Appearance: Gray-green fibrous moss smelling of wet earth and mushrooms.
- Simple Test: Expose it to bright light: it contracts.
- Handling: Store in shade or a covered jar. Direct sunlight or a held torch will shrivel a sample before it can be judged fairly.
- Found: Alchemist Chamber

Honey of the Sun Bee

Alchemical Ingredient

- Appearance: Thick amber syrup with floral and orange-peel notes. It feels warm on the tongue.
- Simple Test: Let a drop fall on a cool spoon: it crawls uphill toward warmth.
- Handling: Keep the jar upright and capped. It draws insects quickly if left open on the bench.
- Found: Alchemist Chamber

Ironvine Thread

Alchemical Ingredient

- Appearance: Thin dark vine threaded with metallic fibers.
- Simple Test: Touch both ends to the iron stirring rod: the thread pulls taut.
- Handling: Keep coiled loosely when not in use. It will snap taut and tangle if left touching iron for long.
- Found: Alchemist Chamber

Kingsfoil

Alchemical Ingredient

- Appearance: Dry green leaves with silver undersides and a pine-and-mint aroma when crushed.
- Simple Test: Crush one leaf in a dry palm: nearby dust lifts toward the scent.
- Handling: Handle dry. Keep leaves flat and uncrushed until testing, or the aroma fades before it can be judged.
- Found: Alchemist Chamber

Moonwater

Alchemical Ingredient

- Appearance: Clear liquid smelling of rain on stone. Shaking makes blue-white sparks.
- Simple Test: Shake in a sealed vial: sparks vanish when the vial stops moving.
- Handling: Keep the vial sealed between tests. Once opened to air for long, the sparking fades and does not return.
- Found: Alchemist Chamber

Nightshade Berries

Alchemical Ingredient

- Appearance: Dried violet-black berries with bitter almond and herb notes.
- Simple Test: Crush one: fingers stain purple.
- Handling: Wash hands after handling. Do not taste; the bitter almond smell alone is the warning.
- Found: Alchemist Chamber

Powdered Pearl

Alchemical Ingredient

- Appearance: Fine ivory powder, impossibly smooth and odorless. In water it makes faint silver swirls.
- Simple Test: Stir a pinch into water: silver ribbons spiral before settling.
- Handling: Keep the vial capped and dry. A stray draft or wet spoon ruins a sample before it can be tested.
- Found: Alchemist Chamber (multiple), Treasure Goblin, treasure chests

Silted Star Anise

Alchemical Ingredient

- Appearance: Rust-colored star pods with licorice and river-mud scent.
- Simple Test: Drop one in water: it points toward the nearest metal object.
- Handling: Keep away from stacks of coins or iron tools during testing, or the pointer gives a misleading result.
- Found: Alchemist Chamber

Thunderhead Lichen

Alchemical Ingredient

- Appearance: Crinkled yellow lichen that smells of ozone after rain.
- Simple Test: Tap it with the glass rod: it snaps once with a tiny spark.
- Handling: Use the glass rod, not a metal one, to test it. It only has the one spark in it; a wasted test on a sample will not repeat.
- Found: Alchemist Chamber
